

Template talk:Python web frameworks

From Wikipedia, the free encyclopedia

Template scope

Since currently they are numerous messy template include the following

- Template:Python (programming language)
- Template:Application frameworks

So, I suggest we move all the links in Application Frameworks accordingly. Here my thought

Python framework will consists of general things

e.g. like founders, history, implementations (C, .NET, Java...etc.), application server + virtual machine, IDEs

Python Web Application Frameworks will consists of

e.g. GUI, RIAs, Ajax, Widgets and possibly CMS.
